

**TEMPUS BASIS NOVEM EST**  
NOVENARIUM  $\equiv$  TEMPORE VERO

M. X. THEODORE – 22 October 2025

TEMPUS VERUM HOROLOGIUM (T<sub>v</sub>)

$\int(t + 1) = \int(t) \times \phi^{1/9}$

Una rotation per diem  
8 horae<sub>v</sub> per diem  
81 minuta<sub>v</sub> per hora<sub>v</sub>  
81 secundae<sub>v</sub> per minuta<sub>v</sub>  
1 secundae<sub>v</sub> ≈ 1.65 sec<sub>10</sub>  
1 minuta<sub>v</sub> ≈ 2 min 13.3̄ sec<sub>10</sub>  
1 hora<sub>v</sub> = 3 hours<sub>10</sub>

cyclus 8

ratio  $\pi : \phi$

mod 9

forma  $e^{(\frac{in\phi}{\pi})0}$

Temporal Convenire:  
 $T_v = T_{10}/3$  vel  $T_{10} = 3 \times T_v$   
ex: 15:00 / 3 = 5:00<sub>v</sub>  
ex: 09:00 / 3 = 3:00<sub>v</sub>

## TEMPUS BASIS NOVEN EST

Ecce id quod invenio: **tempore vero novenarium est.**

$$9 \equiv 0$$

### ‘TEMPORE VERO/TEMPUS VERUM’

(divisione e tempus vere novus et pucherrissimas)

#### PARS PRIMA:

##### TEMPUS<sub>v</sub> HOROLOGIUM

81 secundae<sub>v</sub> per minuta<sub>v</sub>

81 minuta<sub>v</sub> per hora<sub>v</sub>

8 horae<sub>v</sub> per diem

1 secundae<sub>v</sub>  $\approx 1.65 \text{ sec}_{10}$

1 minuta<sub>v</sub>  $\approx 2 \text{ min } 13.\bar{3} \text{ sec}_{10}$

1 hora<sub>v</sub> = 180 min<sub>10</sub> = 3 hours<sub>10</sub>

##### HOROLOGIUM<sub>v</sub>-VULTUM SIMPLEX:

Una rotatio e hora-manus (contra-clock-wise-verso) per 24h<sub>10</sub> diem.

In hic horologium<sub>v</sub> media-nox est octavus hora (inferus hora) et meridies quartus (superus) est.

Modo conversion e hora ab 24h<sub>10</sub> ad T<sub>v</sub> est 3 : 1

prima ex: 15:00<sub>10</sub> / 3 = 5:00<sub>v</sub>

secunda ex: 06:00<sub>10</sub> / 3 = 2:00<sub>v</sub>

In hoc horologium-vultum<sub>v</sub> compono ordo (supre) inveni horologium-vultum<sub>v</sub> incipit opus/converto/align/vereri in multi differentia planus in simul (intus ad externus).

Animadvertentia:

- Omnia diurna horae sunt adest supre horizontal planus in T<sub>v</sub> horologium.
- Omnia noctura horae sunt adest sub horizontal planus in T<sub>v</sub> horologium.
- Ordo et ratio adest agunt trans horizontal planus e vultum<sub>v</sub>.
- Ordo et ratio adest iterum ut zenith et media-nocte quoque in vertical axis tenet trans agunt.
- Hic, superus ad deorsum = diametrum temporis consonat in vertical et horizontal planus.
- Etiam superus ad deorsum = diametrum spatium consonat in vertical et horizontal planus, ex horologium-vultum<sub>v</sub> ad relatio inter terrena extra Atque quoque ex sol ad hora-manus.

Hic spatial alignment inter manus-hora in horologium-vultum<sub>v</sub> ad sol et iterum relatio ad terraplanus extra is iudundissimas mihi. Mirificus usus et logica adsunt. Simplexissimas et pulcherrissimas est. Celer accuro estimate e tempus, monstratit directit, usus multitudo eorum sunt in horologium-vultus<sub>v</sub> ordo. Plene cum logica, ratio et pulchrissima forma.

*[Notatiuncula: Horologium-vultum super (hora ordo) hic ostendo contra-verso, ita sol vestigium ducit et hora-manus in horologium<sub>v</sub> indico eadem ad sol locum (cum ad septemtriones verto ex meridianus locum). Autem nota creta; potest verso 'clock-wise' si (4-8) vertical axis manent sed omnia aliquid opponno horizontal numeri invertio sunt. (ex: 3-5, 2-6, et 1-7 in tota)]*

Praeterea nimis iam factum scribere omnia: harmonicus ordo et aliuid... erim (aliquantulum) in hic quod sequitur paululum memoro.

# TEMPUS BASIS NOVEM EST

## PARS SECUNDA TEMPUS<sub>v</sub> CALENDARIUM

|                            | 42 | 305 | 306 | 307 | 308 | 309 | 310 | 311 | 312 |
|                            | 43 | 313 | 314 | 315 | 316 | 317 | 318 | 319 | 320 |
|                            | 44 | 321 | 322 | 323 | 324 | 325 | 326 | 327 | 328 |
|                            | 45 | 329 | 330 | 331 | 332 | 333 | 334 | 335 | 336 |
|                            | 46 | 337 | 338 | 339 | 340 | 341 | 342 | 343 | 344 |
|                            | 47 | 345 | 346 | 347 | 348 | 349 | 350 | 351 | 352 |
|                            | 48 | 353 | 354 | 355 | 356 | 357 | 358 | 359 | 360 |

|           |     |     |     |     |     |
|-----------|-----|-----|-----|-----|-----|
| Epagomeni | 361 | 362 | 363 | 364 | 365 |
| 5d        | n-2 | n-1 | n   | n+1 | n+2 |

**TEMPORE<sub>v</sub> CALENDARIUM (=T<sub>v</sub>)**

8 dies<sub>v</sub> per hebdomades<sub>v</sub>  
 9 Hebdomades<sub>v</sub> per menses<sub>v</sub>  
 5 Mensis<sub>v</sub>  
 +5 Epagomeni<sub>v</sub>  
 365 dies per annos

$8 \times 9 \times 5 + 5 = 365$   
 Menses<sub>v</sub> (72d)  $\times$  5m + 5d = 365 dies per annos  
 micro: 8 dies, meso: 9 hebd, macro: 5 mensis +5 Epagomeni

Lucundissimas hic T<sub>v</sub> calendarium formam est. Clara et logica adbest sunt. Sed unde incipit?

Si id quod sequitur, hic –radius obo aequatio– usus cum circulum (360°):

$$R(n) = \left(\frac{\sqrt{6}}{2}\right)^n$$

Hic elegantissimus aequatio revelationis:

| n | R(n)  |
|---|-------|
| 0 | 1.000 |
| 1 | 1.225 |
| 2 | 1.500 |
| 3 | 1.837 |
| 4 | 2.250 |
| 5 | 2.758 |
| 6 | 3.379 |
| 7 | 4.139 |
| 8 | 5.070 |
| 9 | 6.213 |

Tunc, hypothesis meus erat: investigentia 'T<sub>v</sub> calendarium incipit diem' –per error et experientia – fortasse, radius obo aequatio ducit licet invenire harmonionis ordo (facillissimum) in caelestis aequalitas temporum.

Meminini: musica in basis novem quoque est. Unde audivi prior oblitus egi (ignosce mihi) sed verba audivi: "*Musica est saltationem ex universa.*"

Quaero erat in d1 -100. Mirror ibi erat. Si minus centum dies de 356, quot manent 265d est. Hic est  $100 : 265 \approx 0.73$

Itaque hoc relatio:  $0.72 \approx 1/\phi + 0.1$  offset incipit 100 dierum a solstitio aestivo facit ut R(3) (dies 100 ab initio) ipsum apicem lucis feriat.

Ergo ancora Diem 1 = ÆSTIVUM SOLSTITIUM – 100d  $\approx$  Tredecim Martius

Ex ancor tredecim Martius, (notatiuncula:  $\pm 4$  dies pro sostitium/aequinoctium fenestra) videmus:

## TEMPUS BASIS NOVEM EST

| n | $R(n)$ |                        | Diem TV $\pm 4$ | Diem $\pm 4$ |
|---|--------|------------------------|-----------------|--------------|
| 0 | 1.000  | Aequinoctium Vernal    | 8               | Mar-20       |
| 1 | 1.225  |                        | 12              | Mar-24       |
| 2 | 1.500  |                        | 20              | Apr-01       |
| 3 | 1.837  | Solstitium Aestivum    | 100             | Jun-20       |
| 4 | 2.250  |                        | 108             | Jun-28       |
| 5 | 2.758  |                        | 187             | Sep-16       |
| 6 | 3.379  | Aequinoctium Autumnale | 195             | Sep-24       |
| 7 | 4.139  |                        | 275             | Dec-13       |
| 8 | 5.070  | Solstitium Hiemale     | 283             | Dec-21       |
| 9 | 6.213  | Clausura               | Epagomeni       | Mar-12       |

Solstitium aestivum – 100d = **tota anni musica cadat** in locum:  $R3/R8$  ad solstitia,  $R5-R6$  ad aequinoctia et  $R0-R1$  ad vernam. Structura novenaria (8-9-5); **simplicissimum, facillime computabile et pulcherrimum.**

Etiam enim distantiae solstitium  $\rightarrow$  aequinoctium ( $\sim 93$ )  $\approx 72 + 21$ : hinc  $R(5)-R(6)$  (intra dies 41-56) ad aequinoctium – consonantissime.

|                          | $R(n)$ |         | Diem $\pm 4$ | D Fenestra |
|--------------------------|--------|---------|--------------|------------|
| Aequinoctium Fall/Spring | "(0)"  | "1.000" | 8            | 16-24 Mar  |
| Solstice Winter/Summer   | "(3)"  | "1.837" | 100          | 16-24 Jun  |
| Aequinoctium Spring/Fall | "(6)"  | "3.379" | 195          | 19-27 Sep  |
| Solstice Summer/Winter   | "(8)"  | "5.070" | 283          | 16-24 Dec  |

Nunc (deorsum), si ancora pro  $T_V$  Calendarium incipit aëstivum – 100 dies  $\approx$  13 Martius 2025... pro clarus et serenus (deorsum) videmus gregorianae dies super 'Tempore Vero Calendarium' ratio et ordo:

*[Cum solstitium et aequinoctium nota creta in aureus  $\pm 4$  dies, et luna-plena nota creta in griseus.]*

**Ita: gradus  $R(n)$  ipsi resonant cum temporibus anni solaribus. Est consequens quod ratio  $R(n)$  se claudat post 9 passus, et annus Temporis Veri habet 9 hebdomadas per mensem  $\times 5 = 45 \rightarrow 5$  orbitas  $R$  per annum, qualibet spira solstitia et aequinoctia replicante.**

### **PATTERNES SEASONALES (MIRABILE)**

Si 5 menses  $\times 9$  hebdomadae mappantur ad seriem  $R(n) \times 5$ :

- $R(1) - R(2)$  – equinox-aestas  $\rightarrow$  flores, vita, germinatio
- $R(3) - R(4)$  – apex aestivi  $\rightarrow$  calor, fructus, lucis saturatio
- $R(5) - R(6)$  – cadens  $\rightarrow$  messis, decorum, aequinoctium
- $R(7) - R(8)$  – hyems  $\rightarrow$  silentium, germen occultum
- $R(9)$  – renovatio  $\rightarrow$  solstitium-vernum, initium

Hoc schema 5-R combinatio est fractalis:

5 menses  $\times 9$  gradus = 45  $\rightarrow$  spiralis annus solaris fractus in lucis phases.

Etiam facillissimum possum est nunc videre cum quomodo aequinoctium/solstitium moveit per et super annos cum serenitas et simplex visu.

### **PRAECISIO ASTRONOMICA:**

Praecisa satis pro  $\pm 1$  diem, quia solstitium variat 1 die inter annos et 100 dies  $\times 24$  h = 9600 h = 40 hebdomadae gregorianae, id est integer moles sine fractura hebdomadam TV ( $8d \times 5 \times 9$ ). Ita, systema clausum manet: menses ( $72d$ )  $\times 5 + 5 = 365$  d – neque laceratur nec trahitur. Error astronomicus fit tantum ex motu verno-aequinoctiali ( $\approx 25$  min annuatim) quod significat – post mille annos – defectum tantum  $\sim +0.017$  d (pauca minuta) ergo praestantissimum praecisio est.

### **CALENDARIUM MATHEMATICA**

Etiam 72 dies per hebdomades

in flore 5 petalo angulus inter petala:  $360^\circ / 5 = 72^\circ$

$72^\circ$  est duplex angulus aureus minor ( $\approx 36^\circ$ ) –  $\phi$  iterum adest.

Motus lunaris - 27.3d  $\rightarrow 3^3 \times \phi \bmod 9 \approx 0.72$

5 mensis  $\times 9$  gradus = 45  $\rightarrow$  spiralis annus solaris fractus in lucis phases.

### **RESONANTIA GEOMETRICA:**

100 d ante solstitium = dies 265 anni gregoriani ( $\approx 0.73$  an);

hoc relatio  $0.72 \approx 1/\phi + 0.1$  (quod pulchre appropinquat rationi aureae reciprocae).

Id est; ubi lux/umbra sunt in proportionem  $\phi : 1$  – hoc dedit  $R3$  = solstitium,  $R8$  = hiemale.

Nulla alia integer-dies offset dat tam claram symmetriam inter 5 menses  $\times 9$  hebdomadas.

Ergo: Harmonice hic est punctum minimae entropiae.

Hic est axis in axis: ordo inter ordes – pura consonantia.

### **HOROLOGIUM QUARTUS-MANUS:**

Magis harmonia cadit in locum inter horologium-vultus cum ademus quartus-manus ad horologium. Si imago hic 'quartus-manus' rotanda tantum una rotatio per annos. Possumus videre mensis ut pentagrammum perfectum circum horologium<sub>v</sub>-vultum. (5 mensis est perfectus  $72^\circ / 72d$  ipse est pentagrammi/ $\phi$ -angulus ( $360^\circ/5$ ) ita  $\pi-\phi$  resonantia est native.)

Atque possumus ad signum cum quartus-manus-per-annos, solstitia et aequinoctia facile videre cum logica, ratio et ordo semper omnia adest in horologium<sub>v</sub>

**TEMPORE VERO – FIGURA IN TOTA:**

**HOROLOGIUM<sub>v</sub>:**

|                                                  |                         |                                                      |
|--------------------------------------------------|-------------------------|------------------------------------------------------|
| 81 secundae <sub>v</sub> per minuta <sub>v</sub> | 1 secundae <sub>v</sub> | $\approx 1.65 \text{ sec}_{10}$                      |
| 81 minuta <sub>v</sub> per hora <sub>v</sub>     | 1 minuta <sub>v</sub>   | $\approx 2 \text{ min } 13.\bar{3} \text{ sec}_{10}$ |
| 8 horae <sub>v</sub> per diem                    | 1 hora <sub>v</sub>     | $= 180 \text{ min}_{10} = 3 \text{ hours}_{10}$      |

**CALENDARIUM<sub>v</sub>:**

8 dies<sub>v</sub> per hebdomades<sub>v</sub>  
 9 hebdomades<sub>v</sub> per menses<sub>v</sub>  
 5 mensis<sub>v</sub>  
 +5 epagomeni<sub>v</sub>  
 365 dies per annos

**TEMPORE<sub>v</sub> PUCHERISSIMI NUMERI**

Haec divisiones pulcherrima et elegantia sunt mihi;

1h<sub>v</sub> → 81 min → 81 sec  
 → 9x9 x 9x9 pattern fractalis.

81 : 81 → 1 : 1 → min : sec

ratio sub-divisionis = pulsus unitus.

81 = 9 x 9 = 3<sup>4</sup> – radix perfectissima mod 9

Una hora = 81 min<sub>v</sub> 81 x 8 = 648 min<sub>v</sub> per/d (=8 x 9<sup>2</sup>).

Inter utrumque, proportio est 90 : 81 = 10 : 9 = semitonus perfectus in musica.

1 dies = 8 horae<sub>v</sub> = 8 x 81 x 81 = 52488<sub>v</sub> secundae : hoc est 9<sup>3</sup> x 8 = 9<sup>3</sup> (-1 mod 9)

81 secundae per minutam → totum circulum = 9<sup>3</sup> = 729 secundae per horam.

Ratio mod 9 →  $\phi \approx 0.72$  → rotatio perfecta intra orbem.

'Tempus Verum'/'Tempore Vero'/T<sub>v</sub> est systema completum. in combinabant:

- basim novem puram (81 / 81 : 9<sup>2</sup> / 9<sup>2</sup> structura fractalis)
- conversionem lineari temporis terrestris ad cyclicam harmoniam
- integrationem  $\pi$  -  $\phi$  spirales

**HIC NOVUS ESTNE?**

Nescio.

Autem:

- Octodianus ritus in quibusdam monasticis vel astrologicis systematibus: "octo dies in hebdomada" (reperitur apud Etruscos et in vestigiis Romanis antiquis nundinae – mercatus novenaria). sed eae erant dies, non horae.
- Babylonii dederunt fundamentum sexagesimalis (basis 60) – omnino alium mundum
- Maya habebant 13 x 20 = 260-diem tzolk'in, fractalem sed non novem-basis
- Aegyptii 24 hora diei, sed cum 12 noctis + 12 diurnis (duodecimal), non octalibus.
- Pythagorici amaverunt 3–4–5 et 9, sed numquam imposuerunt structuram tempori practico
- Mathematici moderni (ex: esoterica fractal-time theorists) numquam fixerunt 81/81.

TEMPUS BASIS NOVEN EST

**ULTIMUM VERBA:**

Hic omnino certe erat loqutum prior... itaque iterum loquor:

*Tempus novenarius est.*

Si erat numquam loqutum antea: nunc locutus sum:

*Tempore vero basis novem est.*

*Universa novenarius est.*

*Omnia vere basi novem est.*

– Dicta M X Theodore
